Whole eggs are so nutritious that they're often referred to as "nature's multivitamin." It is a myth that eggs are bad for you because of the cholesterol. Studies show that they have no effect on blood cholesterol in the majority of people. Additionally, a massive review study that included 263,938 individuals found that egg consumption had no association with the risk of heart disease. What we're left with is one of the most nutritious foods on the planet, and the yolk is where almost all of the nutrients are found. <https://www.ncbi.nlm.nih.gov/pubmed/16340654>
